2ND ANNUAL NYU WINTHROP HOSPITAL

BREAST HEALTH SYMPOSIUM

OVERVIEW

Breast health encompasses multiple specialties and programs, including but not limited to: genetics, radiology, pathology, breast surgery, plastic surgery, medical and radiation oncology, navigation, social work, palliative care and survivorship programs. The amount of information published each year on breast health, benign and malignant, is staggering and staying current can be challenging. This course offers a gathering of clinical experts who will emphasize a multi-specialty team-based approach to translating scientific knowledge into practice. Planners of this course hope the attendees will engage the faculty with thoughtful questions, and leave with expanded knowledge and improved competence that will encourage changes in performance to improve care outcomes for their patients.

LEARNING OBJECTIVES

At the end of this course, participants should be able to:

- Recognize the current implications for genetic testing in breast cancer
- Discuss the current management and treatment options for young breast cancer patients
- Interpret literature on benign and malignant breast disease from 2016
- Relate current medical literature to the evaluation and treatment of Ductal Carcinoma in Situ (DCIS)
- Explain the current medical literature on management of Inflammatory Breast Cancer
- Describe expert advice on the importance of mammography
